

Top-Quality, Performance,
Source, Verified
Bred Heifers

K8
by K8 Farms

We put these heifers in our lot and develop them to maximize their future producing potential. We cull hard for disposition and those that fall short of our production goal will not make it to the breeding chute.

The heifers' health program consists of Dectomax pour-on, 7-Way, One Shot and CattleMaster. They have also been bangs vaccinated and, this spring, they received their PreGuard Gold shot.

We are offering 350 range-ready females bred to fit the needs of today's cattleman. Beside being stout, maternal and performance-minded replacements, these heifers have been ultrasounded in order to pinpoint their calving dates and, in most cases, identify the sex of their calves. Take this opportunity to shorten your calving season and eliminate the guesswork of the resulting calf crop. All breeding information will be provided for you. These top-quality performance heifers are source-verified, coming from proven programs, and will give you the genetic advantage to raise market-topping calves.

DOWN THE ROAD: how will these heifers turn out? This 7 yr old cow is an example of the kind of cattle developed in this program.

CALVING EASE
LONGEVITY
