Bangs Vaccinated

We are offering 305 range-ready females bred to fit the needs of today's cattleman. Besides being stout, maternal and performance-minded replacements, these heifers have been ultrasounded in order to pinpoint their calving dates and, in most cases, identify the sex of their calves. Take this opportunity to shorten your calving season and eliminate the guesswork of the resulting calf crop. All breeding information will be provided for you. These top-quality performance heifers are source-verified, coming from proven programs, and will give you the genetic advantage to raise market-topping calves.
